

EL 6"

Elettropompe Sommerse semiassiali 6"

Semiaxial Multistage Submersible Pumps 6"

Électropompes immergées 6" semiaxial

Electrobombas sumergibles 6" semi-axial

ELETTROPOMPA SOMMERSA SEMIASSIALI 6"

Le elettropompe sommerse serie EL 6 (per pozzi di diametro nominale da 6") sono di tipo semiassiale, in ghisa.

CARATTERISTICHE:

Una particolarità delle serie EL è di avere un solo tipo di diffusore per ogni diametro. Ciò permette una facile gestione delle pompe smontate e dei ricambi. Hanno inoltre la peculiarità di avere l'albero guida di tipo esagonale, per una facile manutenzione.

Le boccole di guida sono in gomma, accoppiate a bussole cromate di forte spessore per un funzionamento continuo in condizioni gravose, particolarmente adatte a forte presenza di sabbia. L'impiego può essere continuo. Gli anelli di usura delle giranti sono in gomma (6" e 8") oppure in bronzo (10" e 12").

Sono possibili costruzioni con giranti in bronzo B10.

Gli accoppiamenti sono tutti normalizzati secondo le norme NEMA, 6" e 8".

Il senso di rotazione è antiorario, visto dalla bocca di mandata.

Gli impieghi sono per acqua pulita e non aggressiva, in particolare: prelievi da pozzi profondi per uso domestico e industriale, impianti idrici di sollevamento, d'irrigazione a scorrimento o a pioggia, acquedotti, pressurizzazioni, sistemi antincendio e di lavaggio, alimentazioni di autoclavi e cisterne.

Prevalenza fino a 500 metri.

Portata massima 96 m³/h

SEMIAXIAL MULTISTAGE SUBMERSIBLE PUMPS 6"

EL 6 submersible pumps series (for wells of a nominal diameter of 6") are cast iron made, of mixed-flow type.

CONSTRUCTION FEATURES:

EL series have only one type of diffuser for each diameter. This allows easy management of disassembled pumps and spare parts. They also have the peculiarity of an hexagonal shaft type, for easy maintenance. The bushes are rubber made, coupled with thick chromed sleeves for a continuous operating in hard conditions, particularly suited to strong presence of sand. The service can be continuous. The impeller wear rings are rubber made (6" and 8") or bronze made (10" and 12").

Constructions are possible with impellers in bronze B10. The couplings are all normalized in accordance with 6" and 8" NEMA standards. The sense of rotation is counterclockwise viewed from the pump outlet.

Uses are for clean and nonaggressive water, in particular: domestic and industrial water supply, water systems for lifting or for shower and running irrigation, aqueducts, pressurisation, fire fighting and washing systems, supply of autoclaves and tanks.

Max head 500 meters
Capacity up to 96 m³/h

ÉLECTROPOMPES IMMERGÉES 6" SEMIAXIAL

Les pompes immergées des séries EL 6 (pour les puits d'un diamètre nominal de 6") sont de type semiaxial, en fonte.

CONSTRUCTION FEATURES:

Les séries EL ont la particularité d'avoir un seul type de diffuseur pour chaque diamètre. Cela permet une gestion facile des pompes démontées et des pièces de rechange. Ils ont aussi la particularité d'avoir l'arbre de type hexagonal, pour un facile entretien. Les roulements sont en caoutchouc, couplés avec entretoises chromées de grande épaisseur pour un fonctionnement continu dans des conditions difficiles, particulièrement indiquées à la forte présence de sable. Le service peut être continu. Les bagues d'usure sont en caoutchouc (6" et 8") ou en bronze (10" et 12").

C'est possible avoir roues en bronze B10. Les couplages sont tous normalisés conformément aux normes NEMA, 6" et 8".

Le sens de rotation est antihoraire vu par la sortie de la pompe. Les utilisations sont pour l'eau propre et non-agressive, en particulier: alimentation hydrique à emploi civil et industrielle, installations d'élévation ou d'irrigation, aqueducs, pressurisations, installations contre l'incendies et systèmes de lavage, fourniture d'autoclaves et de citernes

Max hauteur 500 m.tres
Debit jusqu'à. 96 m³/h

ELECTROBOMBAS SUMERGIBLES 6" SEMI-AXIAL

Las bombas sumergibles de la serie EL 6 (para pozos con un diámetro nominal de 6") son el tipo semi-axial, en hierro fundido.

MATERIALES:

Una característica especial de la serie EL es tener sólo un tipo de difusor para cada diámetro. Esto permite un fácil manejo de las bombas desmontadas y repuestos. También tienen la particularidad de tener el eje de guía de tipo hexagonal, para facilitar el mantenimiento. Los casquillos de guía son de goma, junto con casquillos de cromo de espesor para un funcionamiento continuo en condiciones muy duras, especialmente adaptadas a la fuerte presencia de arena. El uso puede ser continuo. Los anillos de desgaste de impulsores son de goma (6" y 8") o de bronce (10" y 12").

Construcciones son posibles con impulsores de bronce B10. Los acoplamientos están normalizados según normas NEMA, 6" y 8". La dirección de rotación está antihorario, visto desde la salida de la bomba.

Los préstamos son para el agua limpia y no agresiva, en particular: los sistemas de pozos profundos para sistemas domésticos e industriales de agua para la elevación, el riego o la lluvia abajo, acueductos, presurización, la lucha contra incendios y sistemas de lavado, autoclaves proveedoras y tanques.

Altura máxima de 500 metros
Caudal hasta 96 m³ / h
